

NOAH 4.0.13 Patch Build 1422

May 2011

This patch can be installed on the following systems:

- NOAH 4.0.13 (build 1417)

If you try to run on a non supported system the patch installation will give a message stating this.

This patch addresses the following:

- A module appears on the Windows taskbar, but is not visible in Windows. The patch includes an updated module container component.
- In some screen resolutions modules may not redraw correctly, and features or buttons will not be accessible.
- When importing patient data in .nhax format in some cases the action references is lost. The patch includes an updated import/export component.
- The module container will in some situations remain running after the module is closed, taking up resources.

To ensure that the patch is installed properly:

When this patch is applied it is not possible to see it in the Help -> About Noah window. You can see in the Windows Add/Remove programs list that the patch has been installed.

Uninstalling this patch:

After installation the patch can be uninstalled from Windows Add/Remove Programs. All patched components will be back to the original versions.
